MR Curb

	Co\$t/Ft	550 Ft
Asphalt Curb	\$7	\$3,850
Concrete Curb	\$100	\$55,000
Guiderail	\$50	\$27,500

Asphalt Curb - Should the provision of asphalt curb be pursued; it would be the least expensive at roughly \$5-\$7/lf but also provides little to no protection to pedestrians. The current asphalt curb heading up to the Administration Offices is in place to mitigate storm water run off from the end wall structure that drains the Middle School/Admin Offices parking lot as it traverses down Mount Rock Road.

Concrete Curb - Should concrete curb (6-8 inch reveal above the roadway) be pursued, the rough costs would be around \$100/lf but the provision of a concrete curb would initiate the necessity of storm drain inlets or curb openings along the curbing to handle the storm water run off which would likely entail tying-in underground to the local stormwater piping system.

Guiderail - With respect to guiderail, depending on the type selected, you can be anywhere from \$25 to \$50/lf. While this seems like a logical choice, this is not recommended as it would be considered a structure in the clear zone and not allow vehicles to safely recover onto the roadway. Cases have been cited where vehicles were "rebounded" back into oncoming traffic as a result of this type of provision. Additionally, the use of guiderail would entail subsurface penetrations (placing vertical members in the ground to hold the horizontal members) that may impact existing underground utilities that run along Mount Rock Road and could require the relocation of these utilities.
